FOR IMMEDIATE RELEASE

CJ Graphics Inc. acquires new state-of-the-art equipment

TORONTO – CJ GRAPHICS, one of the most recognized printing companies in North America, has expanded their in-house capabilities with the addition of two new state-of-the-art equipment systems. CJ GRAPHICS has added Agfa Graphics' Jeti Tauro H2500 with ABF, and Jeti Ceres RTR3200 LED inkjet systems to their lineup. Powered by Asanti workflow, these wide format solutions provide CJ GRAPHICS with the power to answer the high-quality and consistency demands of their clients.

The Jeti Tauro LED is a 100 inch (2.5 m) wide hybrid UV-inkjet printer with an integrated roll-to-roll system, built for demanding 24/7 workloads. Offering speeds of up to 2960 ft²/hr., the Jeti Tauro LED features continuous and automated feeding of a wide range of media including corrugated board. A powerful adaptive vacuum system holds corrugated and thin media flat for extremely accurate ink placement. The automated board feeder (ABF) can process up to four boards automatically, increasing production efficiency by up to 30%. The white ink capability of this new machine expands applications to backlit POP/POS or for using white as a spot colour on both rigid and roll media.

The second addition, the new Jeti Ceres RTR3200 LED, provides CJ GRAPHICS with the ability to deliver high-quality prints at shocking speeds (2,002 ft²/hr./186 m²/h) on flexible media for both indoor and outdoor applications. This robust, 126 inch (3.2 m) wide roll-to-roll system combines heavy-duty ruggedness with superior throughput that is capable of unattended printing. Ceres offers six colours plus white to enhance the opacity, boost colour contrast, and improve text readability. Offering skip white functionality, the Jeti Ceres achieves faster production by skipping blank spaces in a file and speeding production of the colour data output. Its dual-roll capability offers high throughput for greater flexibility on 60-inch media. CJ GRAPHICS' clients will enjoy faster turnaround and rich results even on unlined mesh and porous substrates.

With the addition of the Asanti workflow, CJ GRAPHICS can deliver colour consistency for enhanced brand communications across multiple printing devices. Asanti optimizes and automates the preparation, production, and finishing steps for sign and display products. Asanti 3.0 integrates with third-party print equipment streamlining print processes while offering reliable, predictable, high-quality results.

With the recent investments in Agfa Graphics' technology, CJ GRAPHICS continues its business strategy, reflecting a dedication to craftsmanship, partnership, and responsibility.
